The TecEco Times

Printed in cyberspace on recycled electrons

Keeping you informed about the eco-cement project. Issue 12 8 May 2001

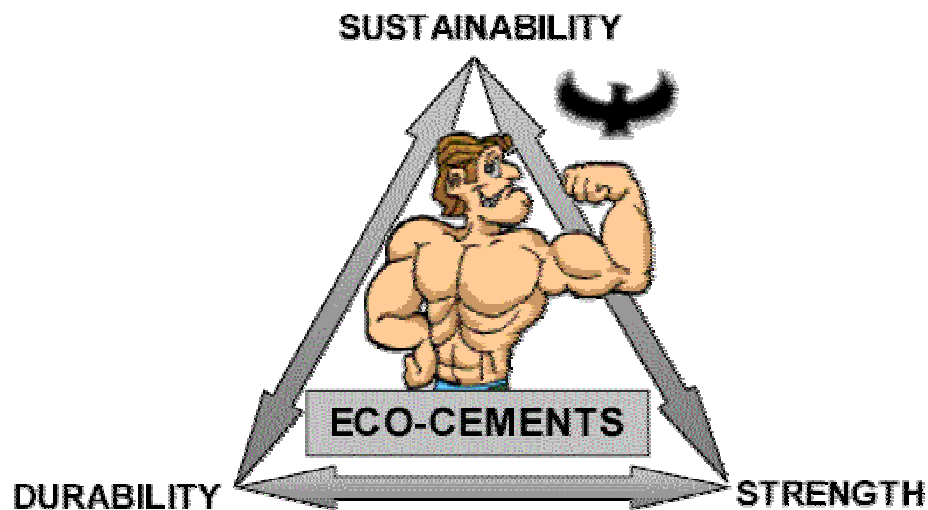

TecEco Passed the Australian Patent Examination Stage Relatively Unscathed.

According to our patent attorneys, Freehills, the company have passed the patent examination stage relatively unscathed, with major claims still intact. We have until July 2002 to raise considerable sums of money for a world wide PCT application.

Blocks in the Making

On Friday last the 4th May 2001 we were able to make masonry blocks with over 70% fly ash and 20% bottom ash using a conventional "Columbia" block making machine. TecEco believe that this exciting development, along with the demonstration block we made in April of this year proves the commercial viability of our technology

New Logo for Eco-Cements

Thermodynamics & Kinetics

We are trying to reconstruct predominance diagrams for the various carbonate minerals found in eco-cements. If anybody has any data on the Gibbs free energy and enthalpy of hydromagnesite and dolomite please pass it on to us.

Feedback on the Patent

The comment so far is favourable. If you are a scientist working in materials and in particular cement and would like to review our work with a view to making comments, please contact John Harrison johnharrison@tececo.com.au.
